S6431M

Silicon Controlled Rectifier for High-Current Pulse Applications

Features:

- Up to 900 Amperes Peak Forward Current Pulses
- 30 Watts Maximum Average Dissipation
- Forward Current of 35 Amperes (rms value)
- Shorted-Emitter Design
- All-Diffused Construction – Assures Exceptional Uniformity and Stability
- Direct Soldered Internal Construction – Assures Exceptional Resistance to Fatigue

The S6431M (formerly RCA type 40216) is an all-diffused, three-junction silicon controlled rectifier (SCR) designed especially for use in radar pulse modulators, inverters, switching regulators, and other applications requiring a large ratio of peak to average current.

It is especially constructed for rapid spread of forward current over the full junction area to achieve a high rate of change of forward current (di/dt) capability and low switching dissipation.

Absolute-Maximum Ratings

RATINGS	CONTROLLED-RECTIFIER TYPE	
	S6431M	
Transient Peak Reverse Voltage (Non-Repetitive), v_{RM} (non-rep)	720	volts
Peak Reverse Voltage (Repetitive), v_{RM} (rep)	600	volts
Peak Forward Blocking Voltage (Repetitive), v_{FBOM} (rep)	600	volts
Forward Current:		
For case temperature of +65°C, RMS value, I_{FRMS}	35	amperes
Peak Pulse Current (See Fig.7)	900	amperes
Rate of Change of Forward Current, di/dt	See Fig.7	
Dynamic Dissipation:		
For case temperature of +65°C	30	watts
For other case temperatures	See Fig.4	
Gate Power :		
Peak, Forward or Reverse, for 10 μ s duration, P_{GM} (See Figs.10 and 11)	40	watts
Average, P_{GAV}	0.5	watt
Temperature:		
Storage, T_{stg}	-65 to +150	°C
Operating (Case), T_C	-65 to +125	°C

*Any values of peak gate current or peak gate voltage to give the maximum gate power is permissible.
